

Project Outline Example

Tarja Halonen NR 218 Final Project

Methods

In order to do the thing, I did several things. I did this, that, the other.

The first step was to pile poodles into a swimming pool. I did this for in order to fill in the swimming pool and keep skateboarders from shredding. Etc,... More detail... blah blah. This produce a raster layer called Poodle Pile, which was saved as `poodle_pile.tif`.

Next, I did something else...

Then another thing...

Layer	File	Description
Poodle Pile	<code>data/poodle_pile.tif</code>	Raster layer created by piling poodles into pool
Another Layer	<code>another_layer.gpkg</code>	Vector layer of something else
etc...	etc...	etc...
